INTERCONNECT SYSTEMS PROVIDES REMOTE PERFORMANCE MANAGEMENT SOLUTIONS TO CUSTOMERS

Leading Unified Communications Provider Helps Customers Pre-Assess and Continuously Monitor Network Infrastructure for Smooth Operations

HUNTSVILLE, AL - December 29, 2010 – Interconnect Systems, an industry leader in unified communications, announced today that the company is providing its customers with Remote Performance Management Solutions. This technology offers a cost-effective remote monitoring and management capability to diagnose underlying network problems, assess network readiness and monitor application performance. This advancement is allowing businesses to capitalize on powerful applications such as VoIP, video, SaaS/ cloud services, disaster recovery and desktop virtualization.

Gartner analysts caution that “75 percent of enterprises that do not perform a pre-implementation analysis of their IP network infrastructure will not achieve a successful VoIP implementation.” Transitioning physically separate voice and data networks onto a single shared infrastructure without compromising the quality of either voice traffic or data traffic will require new practices and procedures. Remote Performance Management Solutions play a central role in successful network assessment.

“The cloud is growing and as a result businesses are becoming

increasingly dependent on cloud-based technologies to run their businesses,” commented Harry Lioce, President of Interconnect Systems. “One example revolves around VoIP technology. Many business owners are attracted to VoIP because of its cost savings and applications that drive employee productivity; however some business owners hesitate because they are concerned about sacrificing call quality. This often occurs when companies conduct business with a technology provider that does not have the proper technical expertise or the tools to successfully deploy IP based solutions. Leveraging advanced Remote Performance Management Software pinpoint network drains, all the way down to the appliance. The tool provides valuable insight that can determine which appliance such as a PC within an organization is sucking up bandwidth causing poor voice or video quality.”

In order to keep up with the rapid pace of technology, data networks will need to become much stronger, faster, flexible and transparent. The success of a business’s operations will be strongly correlated to network performance and Remote Performance Management Solutions allow businesses to diagnose network issues and resolve problems immediately. Data networks are the

lifeblood of business operations and companies like Interconnect Systems are proactively protecting their customers, increasing their profitability and providing them with a competitive advantage.

ABOUT INTERCONNECT SYSTEMS

Interconnect Systems Corporation (ISC) is North Alabama’s largest independent voice and data communications company. The primary goal of the company is to strengthen its customer’s competitive position by increasing its ability to communicate with their customer, vendors and suppliers. Interconnect Systems provides its customers with industry leading products, which are installed and serviced by Factory Certified technicians. Customers are thoroughly trained in every component of their system by ISC’s highly experienced customer service team.

The company’s local dispatch center delivers round-the clock service to ensure maximum system uptime and reliability. Interconnect Systems also offers comprehensive service 24 hours a day, 7 days a week and emergency service guaranteed within 2 hours. For more information on Interconnect Systems Corporation, call (256) 882-1305 or visit www.interconnectsys.net.
